

SERVICES WE OFFER:

Surgery

Whilst we hope that your pet never requires any form of surgical intervention, if the case arises we can offer an extensive range of cardio-thoracic surgical procedures.

We have a fully equipped operating theatre with state of the art anaesthetic, monitoring and surgical equipment. (see also, services we offer: general anaesthesia).

If your pet is in need of a surgical procedure we will make you an appointment with plenty of time so that everything can be discussed with you in detail before you have to make any decisions.

Your pet remains an individual and their needs as an individual are of paramount importance to us.

Thoracotomy: An surgical approach to the chest cavity to gain access to the heart and lungs.
